

EMOTIONAL MANAGEMENT

Tool to Fight Social Media Dependency

On November 2020, the Secondary Schools of the partnership started the survey process that is part of the Erasmus+ project: **'EMOTIONAL MANAGEMENT: Tool to Fight Social Media Dependency'** (2019-1-RO01-KA201-063830).

These surveys are part of the Intellectual Output 1 (IO1) and comprise a pack formed by **3 different online questionnaires targeted to teachers, parents and students of Secondary Schools**. This surveys will be implemented in the Secondary Schools of each country of the partnership: **Romania, Portugal and Spain**.

The survey process started in **November 2020**, in which around **300 students, 60 parents and 30 teachers** of each country will answer the virtual questionnaires.

These surveys will help to collect information on how much time do students spend on the internet and how they use it. The surveys also answer about how much control have their parents and teachers on students while using internet and technologies. The information gathered through these surveys is essential to develop the IO1.

Although we had to postpone the surveys process due to Covid-19 situation, in November 2020 **the schools of the partnership are ready to initiate it!**
